

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Presented) A method in a data processing system for managing display of a new document, the method comprising data processing system implemented steps of:

displaying, in response to receiving a user input indicating that the new document is to be displayed, a list of currently active browser windows including an indication of a presently displayed document in each respective browser window in the list of currently active browser windows; and

replacing, in response to a user selection of a browser window from the list of currently active browser windows, a document displayed in the browser window with the new document.

2. (Original) The method of claim 1 further comprising:

promoting the browser window to a top of a window hierarchy.

3. (Currently Amended) The method of claim [[1]] 23, wherein the indication is a document name from a title bar for the each respective browser window.

4. (Currently Amended) The method of claim [[1]] 23, wherein the indication is a thumbnail of the document displayed in each respective browser window.

5. (Currently Amended) The method of claim 1, wherein the list of currently active browser windows, including the indication of the presently displayed document in each respective browser window in the list of browser windows, is a list of all currently active browser windows ~~displayed in a pop-up menu~~.

6. (Original) The method of claim 1, wherein the receiving step and the replacing step are performed by a Web browser.
7. (Original) The method of claim 1, wherein the new document is selected from one of a Web page, an image, or a spreadsheet.
8. (Original) The method of claim 1, wherein the user input is received in a currently active browser window.
9. (Previously Presented) A data processing system for managing display of a new document on a video display of the data processing system, the data processing system comprising:
 - the video display;
 - displaying means, responsive to receiving a user input indicating that the new document is to be displayed, for displaying on the video display of the data processing system a list of currently active browser windows including an indication of a presently displayed document in each respective browser window in the list of currently active browser windows; and
 - replacing means, responsive to a user selection of a browser window from the list of currently active browser windows, for replacing a document displayed in the browser window with the new document.
10. (Original) The data processing system of claim 9 further comprising:
 - promoting means for promoting the browser window to a top of a window hierarchy.
11. (Currently Amended) The data processing system of claim 9, wherein the indication is a document name from a title bar for the each respective browser window.
12. (Currently Amended) The data processing system of claim 9, wherein the indication is a thumbnail of the document displayed in each respective browser window.

13. (Currently Amended) The data processing system of claim 9, wherein the list of currently active browser windows, including the indication of the presently displayed document in each respective browser window in the list of browser windows, is a list of all currently active browser windows ~~displayed in a pop-up menu~~.

14. (Original) The data processing system of claim 9, wherein the receiving means and the replacing means are performed by a Web browser.

15. (Previously Presented) A computer program product encoded in a computer readable, recordable-type medium and operable in a data processing system for managing display of a new document, the computer program product comprising:

first instructions, responsive to receiving a user input indicating that the new document is to be displayed, for displaying a list of currently active browser windows including an indication of a presently displayed document in each respective browser window in the list of currently active browser windows; and

second instructions, responsive to a user selection of a browser window from the list of currently active browser windows, for replacing a document displayed in the browser window with the new document.

16. (Original) The computer program product of claim 15 further comprising:
third instructions for promoting the browser window to a top of a window hierarchy.

17. (Currently Amended) The computer program product of claim 15, wherein the indication is a document name from a title bar for the each respective browser window.

18. (Currently Amended) The computer program product of claim 15, wherein the indication is a thumbnail of the document displayed in each respective browser window.

19. (Currently Amended) The computer program product of claim 15, wherein the list of currently active browser windows, including the indication of the presently

displayed document in each respective browser window in the list of browser windows, is a list of all currently active browser windows ~~displayed in a pop-up menu.~~

20. (Original) The computer program product of claim 15, wherein the first instructions and the second instructions are performed by a Web browser.

21. (Original) A data processing system comprising:

a bus system;

a memory connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a user input indicating that a new document is to be displayed, wherein a list of browser windows is displayed including an indication of a presently displayed document in each respective browser window in the list of browser windows; and replace a document displayed in the browser window with the new document in response to a user selection of a browser window from the list of browser windows.

22. (Newly Added) The method of claim 1, further comprising: displaying, in response to receiving an initial user input indicating that the new document is to be displayed, a menu of commands associated with opening the new document in: (i) a current browser window, (ii) a new browser window, and (iii) a selected browser window, and wherein the displaying a list step of claim 1 is performed responsive to the selected browser window command being selected by the user input.

23. (Newly Added) The method of claim 22, wherein the initial user input selects a hyperlink that is a uniform resource locator (URL) of the new document to be displayed.

24. (Newly Added) The method of claim 2, wherein the window hierarchy is represented by the list of currently active browser windows, and the browser window is presented as a first item in the list of currently active browser windows when the list of currently active browser windows is next displayed in response to subsequent user input.
